

## Module 6 Rationale:

Actually, I chose the blue as my basic color of this whole designing. The reason is that blue belongs to a kind of warm colors that it is able to bring comfortable to my readers to some degree. And then, I did not just utilize the same sort of blue in my portfolio, I attempted to include some different blues so that making readers have deep impression about each of my pages. In addition, except for color, I think that a good as well as concise content is also essential for my final portfolio. Sometimes maybe too much words descriptions cannot help the audience to concentrate on the main points of my designing, so I wanted to insert some images to underscore my theme as much as possible. After that, I will also do some relevant descriptions to help audience easier catch up my meaning than merely listing images. Because of the limited space for my portfolio, I do not want to show my entire resume on the “Resume” pages, I will put a link to my resume page instead. Overall, I changed not so much about the content of my portfolio compared with the previous wireframe. Nevertheless, from my point of view, both my “Writing” and “Blog” pages are a little bit repetitive, I am thinking to add more of my writing artifacts to the “Writing” page. Besides, when I tried to insert images in the beginning, I showed too much about myself not my achievements in major fields. My daily life ought to be a part of the portfolio, however, more important thing still should be the writing in my opinion. According to look at other Professional Writing alums’ portfolios, I have learned about some basic concept and formats of it, but I am still not get a good job in content management, to some extent this time.
